

SBL Citation Examples for Pandoc/Citeproc

Adapted from biblatex-sbl-examples.tex

2026-03-27

Introduction

This document mirrors all the examples from the `biblatex-sbl` package (SBLHS 2nd edition, sections 6.2–6.4 and 7.1–7.3), adapted for pandoc Markdown with citeproc. It serves as both a demonstration and a test document for the SBL citation system.

Each section corresponds to a subsection in the `biblatex-sbl-examples.tex` file. Examples show first-note citations (full form), subsequent-note citations (short form), and parenthetical citations where applicable. The bibliography is generated automatically by citeproc.

To render this document:

```
pandoc sbl-examples.md \
  --citeproc \
  --lua-filter=sbl-filter.lua \
  -o output.html
```

Without the Lua filter, the CSL produces sensible output for all standard entry types. The filter adds shorthand handling, bibliography control, abbreviation list generation, and subsequent note refinements.
